Tutorial 1

1. Define the following terms in your own words:
    1. Usability
    2. User Experience
    3. User Interface
2. Analyse (without considering emoji) the provided screenshots of two different Banking institute and answer below questions:

Bank 1

Bank 2

In your group, discuss and identify the following for each application:

a. What works well? List down specific elements that contribute to a good user experience (e.g., layout, colours, navigation).

b. What doesn't work? Identify issues or elements that negatively impact usability and user experience (e.g., confusing navigation, cluttered design).

c. What are the key differences between the good and poor UI/UX applications?

d. What specific improvements would you suggest for the application with relatively poor UI/UX to enhance usability and user satisfaction?

3. Create a quick design scenario: "Design a product for elderly users to manage medications." Discuss in group and answer the following questions:

    1. What: What is the product designed to do?
    2. Who: Who are the primary users and stakeholders?
    3. Where: Where will the product be used?
    4. How: How will the product help elderly users manage their medications?
    5. design?

Each group should present their design approach briefly, highlighting the key aspects of their solution.

4. What specific elements should be tested in a banking app to ensure usability and user satisfaction? Share your ideas and discuss which features are most critical for a seamless user experience.
