6BUIS018W – Information Driven Entrepreneurship and Enterprise

Tutorial 4 - Commerce Systems Analysis and Design

Tutorial 4 is based on Lecture 4. You can find Lecture 4 notes on Blackboard.

You need to work in groups of two to five. Please discuss the following questions within your group and write down the agreed answers. You should clarify any questions and discuss your answers with your tutor.

The task:

Case study:

You are planning to open a new on-line music (CD, Vinyl, Download, etc.) shop. You are fully aware of the strong competition and therefore you aim to target a market niche instead of competing with the largest players directly.

Last week you have analysed your competitive position on the market and prepared a strategic plan. This week you are going to collect functional requirements of the system and will create a use-case-diagram to document these requirements.

Before starting to work on the task please assure that you already have:

- a table comparing similar businesses (structure, services, order processing, payment methods, shipping, advantages, disadvantages etc.).
- an outline of your viable business idea
- a competitive analysis using Porter's 5 forces model
- a SWOT analysis formulating basic strategies with the help of a SWOT matrix
- a PESTEL analysis
- CSF analysis defining the key features of your e-business solution in order to achieve your business objectives

Tasks for today:

1. Identify requirements. Provide a list of clearly defined user requirements for your music shop website and map them to suitable use cases. Use the template introduced during the lecture.
2. Draw a use case diagram showing your functional requirements. Identify actors, use cases and suitable relationships (include, extend, generalisation).
3. Create a use case description for at least one of your use cases with considerable complexity. Use the template introduced during the lecture.
4. Work within your coursework group and discuss the strategic and systems analysis and design aspects of your own business idea.

Some help:

Question 1:

Requirements		***Use Case Mapping***
1.	Visitors should be able to browse the website and look for items they are interested in.	Browse website
2.		
3.		
4.		
5.		
6		
7.		
8		
9.		
10.		
11.		
12.		
13		

Question 3:

Use Case Name		
Brief Description		
Actors		
Purpose		
Pre-conditions		
Main Flow	**Actor Action** 1. 3.	**System Response** 2.
Alternative Courses		
Post-conditions
